

Control4 DS2 Tamper Switch **C4-DS2TS**

The **Tamper switch** for **DS2 Door Station** is used to detect unauthorized opening of the device and subsequently activate a silent (remote) or local alarm.

- The module is installed below another module, and always combined with the I/O module. There is no need to reserve a separate position.
- Option to connect to a third-party security system

See **ctrl4.co/ds2** for more information.
